-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-6 are rejected under 35 U.S.C. 102(e) as being anticipated by Shuman (US 2003/0151783 A1).

Shuman discloses a spatial light modulator comprising a multiplicity of pixels arranged in a lattice form (paragraph [0039]) for selecting a transmission or reflection state and a blocking state of light on each pixel thereby spatially modulating light intensity (line 2 to line 3 of paragraph [0042]), the spatial light modulator; wherein light transmissivity distribution or light reflectivity distribution over whole pixels is set such that a light transmissivity or light reflectivity is lower at and around a center of an arrangement of the pixels and increased with increasing distance from the center. (paragraph [0055]).

Regarding claim 2, one of ordinary skill in the art appreciates that Galilean apodizer of Shuman discloses the light

transmissivity distribution or light reflectivity distribution being set substantially inversely proportional to Gaussian distribution (i.e., to produce flat-top intensity profile).

Regarding claims 3 and 4, Shuman discloses the light transmissivity through or light reflectivity upon the pixels being inherently set on each pixel.

Regarding claims 5 and 6, Shuman discloses the modulator being used in a holographic recording/reproducing apparatus which is inherently comprises a control means and a light-receiving means (paragraph [0036] to [0041]).

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
